EUR-CL (EPC): B07C003/18

US-CL-CURRENT: 235/375

ABSTRACT:

CHG DATE=19990617 STATUS=O> A printing system for printing mail pieces including at least one page having an address. The system includes a printer (20), a controller (40), and a feeder (10,12) for selectively feeding an envelope or a cut sheet to the printer. The controller examines the text of each page to identify a destination address, and when the destination address is found prints it on an envelope for the mail piece. The system also has the capability to identify and print return addresses

and the capability to print the envelope either before or after pages included in the mail piece.
